### 01-1) Safety Instructions

# [Warnings]

- [1] Users shall carefully read the following to protect the safety of users and prevent property damages, and keep user manual in a safe place.
- [2] If users do not comply with the instruction, they may get severely injured.

#### <Instructions>

1	Do neither apply force to terminal, throw terminal nor shock terminal with
	sharp objects. Or it may cause heating, ignition or explosion.
2	Do not use device while driving.
	It may lead to direct or indirect accident.
3	Make sure to turn off the power in places (e.g. Airplane, hospital, etc.) where
	the use of electrical devices is prohibited. Or it may cause safety accident or
	affect the peripheral devices.
4	Keep terminals from children or pets. Terminal can be damaged when it is
	chewed up or sucked. If a kid uses terminal, his or her guardian shall instruct
	them how to use it correctly and check if they use it correctly.
5	Please do not use it in the humid environment. If the terminal is used in a
	closed and warm environment such as inside cars or Korean style sauna, it
	may cause corrosion/heating/ignition/explosion. In addition, humidity or liquid
	may cause damages to the parts and circuits of terminal.

#### 03. How to start Ubicheck

# Configuration of the whole menu

Order	Menu Name	Description
1	Broadcast	Wireless Broadcast
2	Tag Search	Searching tourists' tags. Inquiry about the existence of tags and information on distance
		information on distance
3	Passenger	Screen for the inquiry about the tourist information downloaded
	Information	from PC
4	Destination	Screen for the inquiry of the destination information downloaded
	Information	from PC
5	Configuration	Language setting, etc.

#### 1) Common Functions

#### 1-1) SUB MENU / Shortcuts

All screens, except for the initial screen, contain SUB MENU. SUB MENU, configured to each menu, provides functions- 'Tag Search/Broadcast', 'Previous Screen/Power OFF". SUB MENU is executed by 3 buttons at the bottom of device and the buttons are connected in sequence. For example, if "Search", "Select", "Previous" are displayed in SUB MENU at the bottom of screen, the left button at the bottom of device calls "Search" function and the middle Select Button performs "Previous" function. Thus the buttons at the bottom of screen serves as shortcuts.

#### 1-2) Go to the main menu

In all screens, except for the initial screen, if the middle button at the bottom of device is pressed for 2-3 seconds, you can go to the main menu.

#### 1-3) Turning off device

In all screens, if the right button is pressed for 2-3 seconds, the power is turned off.

### 1-4) Menu Select Key

The middle key at the bottom of terminal serves as mouse. If the middle key is moved by fingers in the selectable menu, the menu will move from left to right. In addition, if the screen needs to be scrolled down because it contains too long contents, rub the middle button down using fingers. To move in the opposite direction, scroll the screen in the opposite direction

# 2) Broadcast

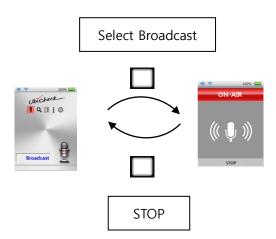

Tourists can listen to the guide by plugging earphone into the tag provided when the terminal starts broadcasting. The left screen executes functions.

#### 2-1) Instant Broadcast (Live Broadcast)

To increase the life of battery, screen turns off while broadcast continues after 10 seconds of the start of broadcast. If buttons or mouse touched, the screen will be turned on, yet will turned off again after 10 seconds if there is no key operation. Press "STOP" to end broadcasting.

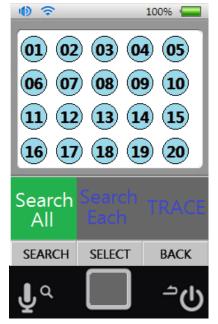

Place Select Menu rectangle in the area for searching tags and press the middle button to go to Tag Search screen [3-1].

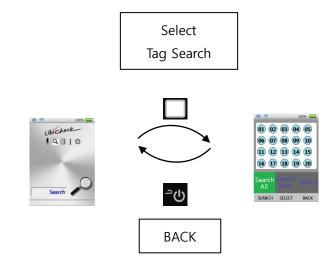

#### 3-1) Tag Search Initial Screen

The numbers of terminal appear in a small circle in accordance with the number of tourist set in the terminal. Light blue color means searching has not been conducted. If the number of tourist exceed 20, scroll bar is generated in the right side of terminal. Rub the middle button at the bottom of terminal to scroll down the screen.

To execute Total Search, let Select Menu box "Search All" and press Select button. If you do so, you can go to the screen for selecting tag search areas [3-2].

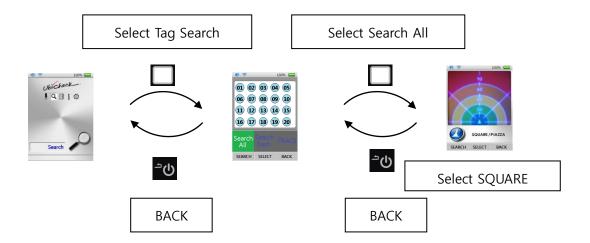

#### 3-1-1) Screen for the selection of tag search areas - SQURE/PIAZZA

This product enables it to calculate the distance between guide and tourist roughly using wireless transceiver mounted in the terminal for guide and tags for tourists, thereby checking if there is any person who is deserted. The table below shows rough distance and the values may vary depending on the surrounding environment. Please refer.

Search Mode	Areas for use (example)	Search Range
SQUARE	Outdoor square	Within about 70m
LOBBY/HALL	Halls in museums or exhibition	Within about 50 m
	halls	
BUS/TRANSPORTATION	In vehicles such as buses	Within about 20m
ON BOARD	Boarding on buses	Within about 1-2 m

This mode is for outdoor searching, covering the widest area among the Total Search modes.

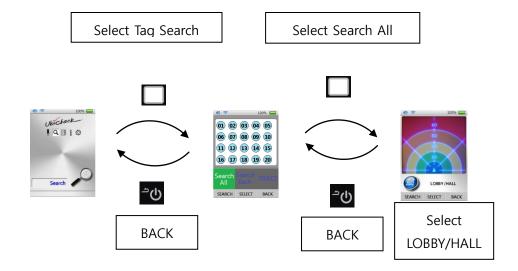

# 3-1-2) Screen to select Tag Search areas - LOBBY/HALL

This mode covers wider areas than busses, so can be used for searching in indoor rooms in museums or exhibition halls. Select the following mode for wider searching.

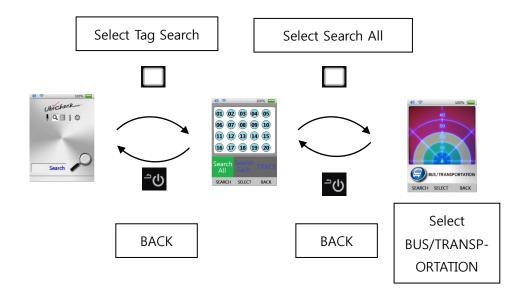

#### 3-1-3) Screen to select Tag Search areas - BUS/TRANSPORTATION

This mode is used to check if there is any person deserted in small places such as buses. Rub the middle button in the terminal to select other modes.

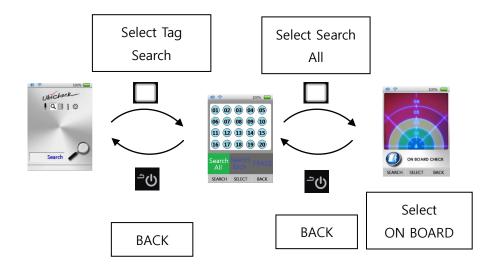

# 3-1-4) Screen to select Tag Search areas - ON BOARD

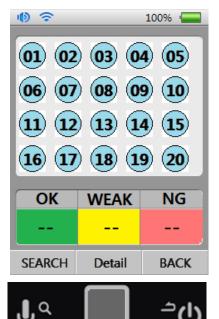

This mode is used to search the smallest areas. So this mode is used to search tourists by the entrance of buses while they are boarding buses.

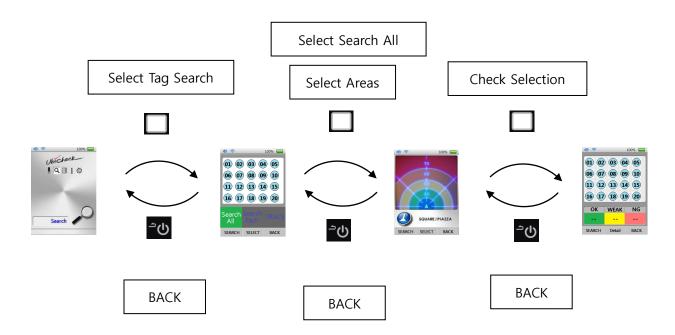

#### 3-2) Tag Search execution screen

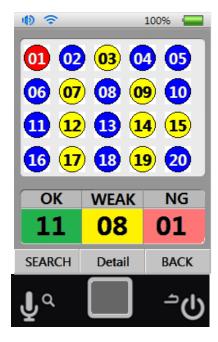

This screen appears if the search areas are determined and search is executed. The whole tag numbers blink, indicating searching is in process.

The tags which are searched are displayed in green and the tag which are searched yet have weak signal are displayed in yellow and the tags which are not searched are displayed in red.

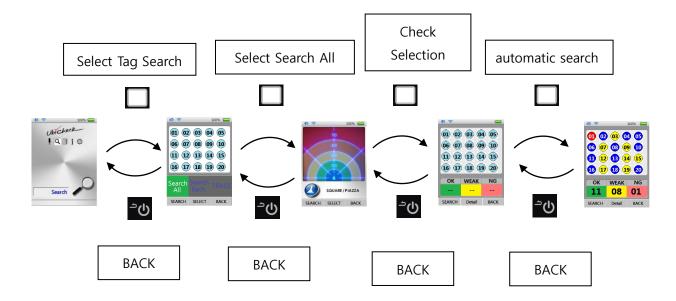

#### 3-3) Tag Search Execution Screen

When search is conducted after about 7-8 seconds, the results are displayed in colors. Tags were displayed in sequence from 1 in the past, but the tags for which searching failed are displayed first in the Search Results screen.

For example, the current screen shows tag 1 failed; tag 2,4,5,6,8,10,11,13,16,18,20 are normal; tag 3,7,9,12,14,15 have been searched but have weak signal.

For the tags for which searching was failed like No.1, only the tag can be searched again using the following individual tag search function.

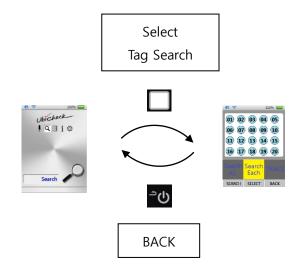

# 3-4) Individual Tag Search

This menu is used to search the tags for which search failed after the total search. The figure below is the execution screen.

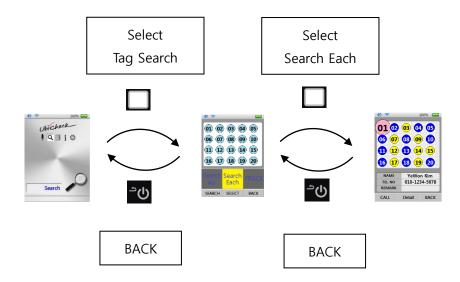

#### 3-4-1) Individual Tag Search Execution Screen

The tags that were not searched on the basis of the results of previous search are displayed in red, while normal tags are displayed in blue and the tags with weak signal are displayed in yellow.

Middle mouse button moves the screen left, right, up and down. The re-selected tags have larger circles than other tags and the information of tourists who have tags are displayed at the bottom.

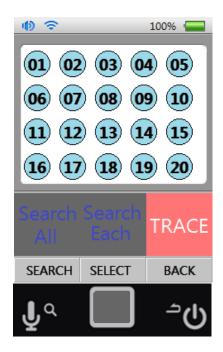

By pressing "Call" button, you can search that particular tag again. By pressing "Details", you can look the details including the photos of tourists

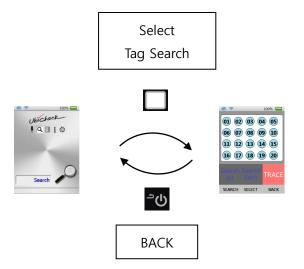

# 3-5) Tag Tracking Search

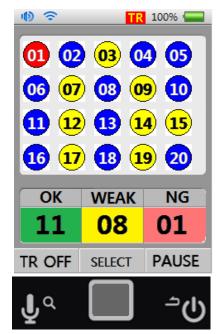

This menu is used to search the tags for which search failed after the total search. The figure below is the execution screen.

#### 3-5-1) Tag Tacking Search Execution Screen

Tracking Search is a mode which enables it to continuously check the existence of tags, and is used for the movement in groups. Total search and individual search work for the specific time, yet the tracking search continues to work unless separate "End Search" is selected. It searches and display the results in real time. The tags in the distance of about 20m are displayed in green; the tags on the boundary are displayed in yellow; the tags for which search failed are displayed in red. If tags enter the certain distance, they change to green.

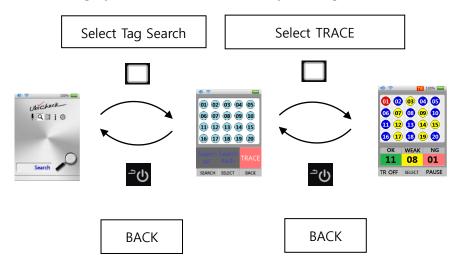

Since it continues to search tags, more power is consumed than other mode. If you keep it switched on all the time, it will consume battery quickly. If you move to other mode using shortcut, TR Mode is automatically turns off.

If you want to execute tracking search, execute TR ON on the

left at the bottom. If it starts, TR is displayed in red at the top of the screen. If you want to end tracking search, press TR OFF key at the bottom.

Right shortcut works by "Previous" button in the state of TR OFF, by "Pause" in the state of TR ON and by "Restart" in the state of "Paused".

The tags which were not searched are displayed first according to the state of real time search. It there are more than 20 tags, you can check the bottom by scrolling them.

# 4) Tourist Information Inquiry

This function allows you to search the tourist information downloaded from PC administrator program using terminal. If you choose this menu, this screen appears.

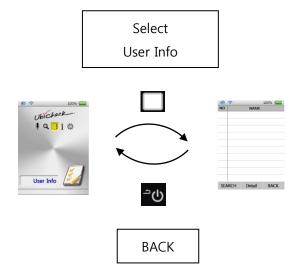

# 4-1) Tourist Information List Screen

Tourist information is displayed in list.

Move mouse to move the screen up and down using fingers. To see the detailed information of the selected tourist, press the middle button.

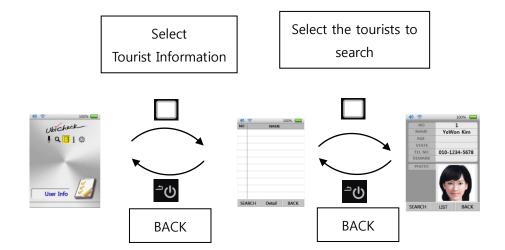

#### 4-2) Detailed Tourist Information Inquiry Screen

This screen allows you to look up the information of the selected tourist. This information can be generated/edited in PC Administrator Program. If you select Tag Detailed Information, this screen is brought.

- Number-Tag number
- Name The name which was input in administrator program
- Age The age which was input in administrator program
- Status Search Results [normal / weak signal / faillure]
- Contact The phone number which was input in administrator program
- Remarks- Remarks input in administrator program
- Photos-The photos input / taken in administrator program

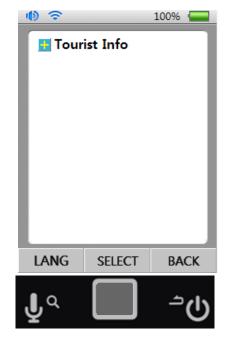

# 5) Destination Information

This screen allows you to loop up the destination information input in PC administrator program.

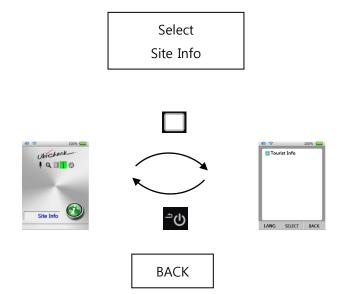

#### 5-1) Destination Information Execution Screen

Contents can be seen in TREE types. By selecting mouse with mouse, the sub-items can be seen.

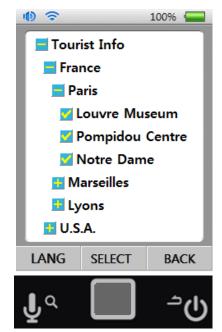

"+" mark means there are sub-items; "-" mark means the sub-items are unfolded; "v" mark means there are no sub-items but details can be displayed in separate screen.

Items can be unfolded or folded again using mouse. If you want to unfold the selected items, press "Select" button. If you want to fold them again, press "BACK" key.

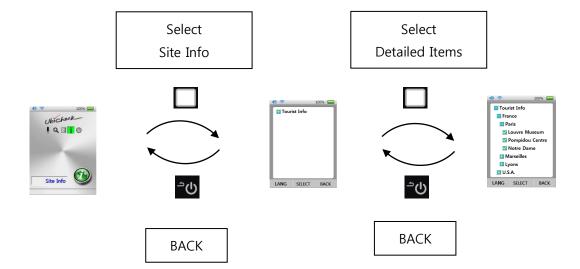

#### 5-2) Unfolded Destination Information Screen

"LANG" key allows you to choose different language from language pack.

Select the item with "v" mark using mouse, then the details of that item are displayed in the separate screen.

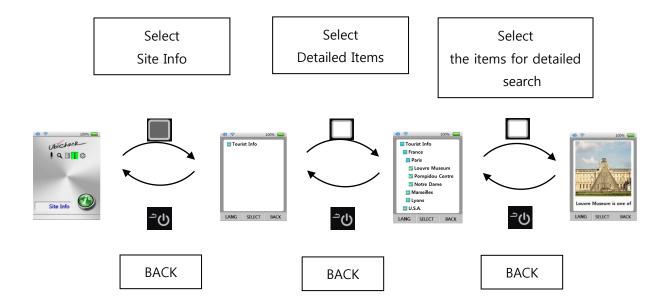

# 5-3) Destination Information Detailed Inquiry Screen

You can scroll up/down the screen containing long contents using mouse button.

# 6) Configuration

You can change the language of menu in Configuration

# 6-1) Configuration Execution Screen

Choose language and press "Select", then the language of menu changes into the selected language.
